

WHITEPAPER

Kurama Project - Bridging NFTs and Community Rewards

1. Introduction

The Kurama Project is a community-driven initiative designed for fans of the anime Naruto. With the introduction of the KRM token, the project aims to reward the community and harness the powers of the original NFTs from the Kuramas collection. The primary objective is to become the first NFT Automated Market Maker (AMM) on the Polygon and Kronobit network, offering a Bridge for widespread connectivity. By providing rewards to all NFT holders through Stake with KRM tokens, accompanied by a fast multi-router exchange (wasp), the Kurama Project aspires to establish itself as the primary AMM on the Kronobit Network Blockchain. This will enable projects launching NFTs to stake their collections and reward their communities with KRM tokens, while also requiring the payment of KRM tokens for listing collections in the AMM to maintain the price of KRM on various networks.

2. Tokenomics

The KRM token has a maximum supply of 10,000,000 tokens. The token distribution is as follows:

- Team: 5% of the supply will be allocated to the team, which will be locked for a period of one year.
- Marketing: 5% of the supply will be utilized for marketing efforts, including airdrops and collaborations.
- Development: 5% of the supply will be dedicated to the ongoing development of the Kurama Project.
- Pre-sales and IDO: 15% of the supply will be allocated for pre-sales and Initial DEX Offering (IDO).
- Future Listings: 10% of the supply will be locked for a year to support future listings on centralized exchanges (CEX).
- Stake: 35% of the supply will be reserved for stakeholders and holders of KRM tokens.
- Bridge with Kronobit: 35% of the supply will be utilized for the bridge connecting the Kurama Project with the Kronobit network.

3. KRM Token Utility and Features

3.1 Token Utility

The KRM token serves as the primary utility token within the Kurama Project ecosystem. It provides various functionalities and benefits to token holders, including:

- **Governance:** KRM token holders have the power to participate in the governance of the Kurama Project by voting on proposals and decisions related to the platform's development, upgrades, and future directions.
- **Staking and Rewards:** Holders of KRM tokens can stake their tokens to earn additional rewards. These rewards are distributed based on the number of tokens staked and the duration of the stake, incentivizing long-term participation in the ecosystem.
- **Listing on AMM:** Projects launching NFTs can list their collections on the Kurama Project AMM by paying a listing fee in KRM tokens. This requirement ensures that the KRM token maintains value and demand.

3.2 Token Features

- **Sell Tax:** For the first year following the market launch, the KRM token will have a sell tax of 7%. This tax is divided as follows:
 - 2% of the sell tax is redistributed to all KRM holders, encouraging token holders to retain their holdings.
 - 3% of the sell tax is allocated to the KRM liquidity pool, ensuring the stability of the token's liquidity.
 - The remaining 2% of the sell tax is utilized for ongoing development and improvements within the Kurama Project ecosystem.

4. Roadmap

The Kurama Project has outlined the following roadmap to guide its development:

- Phase 1: Token Launch and Community Building

- Token creation and deployment on the Polygon network.
- Initial community building efforts, including social media presence, partnerships, and airdrops.

- Phase 2: Development of AMM and

Bridge

- Development of the Kurama Project AMM on the Polygon network.
- Implementation of the bridge connecting the Kurama Project with the Kronobit network.
- Integration of the multi-router fast exchange (wasp) for efficient token swaps.

- Phase 3: Staking and Reward Mechanisms

- Implementation of staking functionalities, allowing KRM token holders to earn rewards by staking their tokens.
- Launch of the staking platform and the associated reward distribution mechanisms.

- Phase 4: Listing and Expansion

- Opening up the Kurama Project AMM for listing NFT collections.
- Collaboration with other projects to incentivize the use of KRM tokens as a listing fee.
- Expansion of the Kurama Project ecosystem through partnerships and integrations with other platforms.

5. Conclusion

The Kurama Project aims to revolutionize the NFT landscape within the Naruto fan community. By introducing the KRM token and building the first NFT AMM on the Polygon and Kronobit network, the project seeks to reward the community and empower NFT holders. With its unique tokenomics, including staking rewards and a sell tax mechanism, the Kurama Project aims to create a sustainable ecosystem while maintaining the value of the KRM token. The team is committed to ongoing development, governance, and collaboration, ensuring the long-term success of the project and the satisfaction of the Naruto fans.
